

## DIY Sun Print Greeting Cards Kit Instruction Manual

### Kit Includes

- > 4 x greeting cards
- > 4 x envelopes
- > 4 x sun print sheets
- > 4 x stencil sheets
- > 1 x PET sheet
- > 1 x glue
- > 1 x instruction sheet

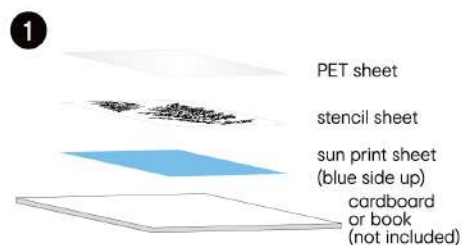

### Tips

- > Use the stencils provided or find your own flowers and leaves to create your desired patterns.
- > For best results, prepare the print in dim light before exposing it to sun light.
- > If there is little sunlight, expose the print for longer.
- > Lay the print on paper towel to dry it.

### How To Make A Sun Print Greeting Card

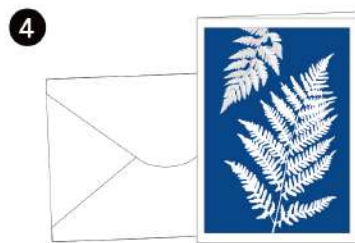

Select a stencil sheet. In the order shown, layer the PET sheet, stencil sheet, and sun print sheet on top of a piece of cardboard or book (not included). Ensure the sun print sheet is blue side up.

Place the layered sheets in direct sunlight for 1-5 minutes. The areas of the paper exposed to the sun will fade from blue to white, leaving a pattern.

Remove the sun print sheet and rinse it in water. The colours will reverse, with white becoming blue and blue becoming white. Leave the sheet in water for 1-5 minutes to achieve a deep blue colour.

Lay your sun print paper flat on an absorbent surface and allow it to dry. To complete a greeting card, glue the sun print paper onto the greeting card front and allow it to dry for a few minutes.
